Curriculum Vitae

Personal Details

Name: Y VAN DANG

Title: Backend Engineer (Python) — Microservices | Django / FastAPI | PostgreSQL | ETL

Location: Vietnam — Available for Remote Work

Mobile: 0908133919 | **Email:** dangvany@gmail.com

Apply for: Backend Engineer (Python) — Parcel Perform

Professional Summary

Backend Engineer focused on Python, Django/FastAPI, PostgreSQL, and data pipelines, with experience operating in microservice-style architectures. Over several years of building backend systems for SaaS, banking, and transaction-heavy products (4+ years with Python APIs and services), I design and optimize scalable RESTful and near real-time APIs, ETL pipelines, and background jobs that handle high-volume data. Comfortable with Redis caching, message queues, load/performance considerations, and AWS-based deployments, and used to collaborating closely with frontend and data teams to ship reliable B2B-style features for end users.

Career Summary

Timeline	Company & Position
Sep 2022 to present	**GEAR INC** — Senior Backend Engineer (Python / FastAPI / APIs / Data)
Nov 2020 to Aug 2022	**SACOMBANK** — Backend Engineer
Sep 2016 to Oct 2020	**PRUDENTIAL FINANCE** — Backend / Software Engineer
Jul 2013 to Aug 2016	**RINGER VIETNAM** — Software Engineer
Jun 2009 to Jun 2013	**GAMELOFT** — Developer

Professional Experience

Gear Inc (Sep 2022 to Present)

Senior Backend Engineer (Python / FastAPI / APIs / Data)

- Own high-level goals and shape them into production-ready, microservice-based Python services using FastAPI (and Flask where appropriate)
- Design and build RESTful APIs and near real-time endpoints consumed by internal tools and external integrations; define clear, versioned API contracts with frontend teams
- Develop and maintain data pipelines and ETL/ELT-style syncs between internal systems and third-party platforms (batch and near real-time), supporting analytics and reporting use cases
- Optimize PostgreSQL schemas and queries for reporting and analytics workloads; ensure reliability and performance on large datasets with proper indexing, partitioning, and query tuning
- Implement caching and background processing patterns (Redis, task queues, Kafka-style event streams) to handle asynchronous and long-running jobs
- Use AI tooling (LLMs, RAG, automation) to accelerate development and improve data processing flows where specifications are incomplete
- Collaborate on architecture, data models, schema migrations, and Docker/CI/CD pipelines for production deployments on AWS

Sacombank (Nov 2020 to Aug 2022)

Backend Engineer

- Delivered backend services for large-scale internal banking applications used by business and operations teams in a highly available environment
- Designed and optimized PostgreSQL schemas, indexes, queries, and migrations; built reliable RESTful APIs for internal and partner system integrations
- Implemented batch and incremental data sync jobs (cron-based and queue-driven) for reporting and reconciliation use cases, leveraging message queues where appropriate
- Shipped integrations between modern services and legacy systems with a focus on clean, maintainable code, observability, and performance under load

Prudential Finance (Sep 2016 to Oct 2020)

Backend / Software Engineer

- Built backend systems and services supporting internal tools and workflows used by operational and business teams
- Designed data models and APIs; maintained and evolved large-scale applications with attention to reliability, tests, and clean object-oriented design
- Developed ETL-style processes to move and transform customer and transaction data between operational systems and reporting stores, ensuring data quality and auditability

- Worked with background processing and job queues to handle long-running workflows and reduce load on core APIs

Ringer Vietnam (Jul 2013 to Aug 2016)

Software Engineer

- Built backend components and APIs for digital platforms; implemented application logic and data layers for production systems

Gameloft (Jun 2009 to Jun 2013)

Developer

- Implemented gameplay systems and UI features; collaborated with designers and product teams; contributed to production releases

Academic Background

Bachelor of Design and Multimedia, RMIT University Vietnam

Core Skills

- **Python Backend:** 5+ years building backend services with Python; FastAPI and Django REST APIs; authentication, validation, pagination, error handling, and clean object-oriented design
- **Microservices & Scaling:** Experience designing and operating microservice-style architectures; focus on resilience, performance, load balancing, and horizontal scaling
- **ETL / Data Pipelines:** Design and maintenance of ETL/ELT workflows; batch and incremental sync of data across systems; monitoring, recovery, and data quality
- **Async, MQ & Background Jobs:** Background job processing and task queues (Celery-style workers); use of message queues and event streams (Kafka-style, RabbitMQ/SQS concepts); scheduling, retry, and idempotent job design
- **Data & Databases:** Strong PostgreSQL skills; schema design, indexing, query optimization, and performance tuning on large datasets; comfortable with NoSQL concepts and when to apply them
- **Caching & In-memory Stores:** Redis-based caching and in-memory storage patterns to offload databases and speed up high-traffic endpoints; rate limiting and session-style use cases
- **APIs & Integration:** Integration with third-party REST and e-commerce-style APIs; understanding of RESTful and near real-time communication; focus on reliability, observability, and fallbacks
- **Cloud & Infrastructure:** Docker, AWS (incl. common services such as EC2, ECS, RDS, S3), CI/CD; experience running and monitoring services in production

- **Frontend Collaboration:** Comfortable reading and working with HTML, CSS, React/Next.js code to debug and iterate on API contracts with frontend teams
- **AI in Daily Work:** Use LLM tooling (RAG, LangChain-style flows) to automate data extraction, enrichment, and internal workflows

Portfolio Projects

- **AI Backend Job Finder:** Scrapes job sites, LLM filters backend jobs, desktop UI. — View
- **AI Email Router:** LLM classifies email intent, routes to department, desktop app. — View
- **Case mini backend:** Mini case/order management API: CRUD, validation, pagination. Spring Boot, Redis cache, Swagger, Docker. — View
- **Microservices:** Multiple Spring Boot services, event-driven via Kafka. PostgreSQL, Redis, built to scale, Docker. — View
- **Payment transaction API:** Safe payment transaction API: idempotency keys to avoid duplicates, transaction-safe DB operations. Spring Boot, PostgreSQL, Redis. — View
- WWE Champions Game (Product Management & UI) — View
- Sacombank Digital Banking Platform (Product Owner) — View
- HDBank Mobile App (Product Strategy) — View
- Outdoors Marketplace (Product Manager) — View
- Third Place Marketplace (Product Owner) — View
- EVN App (Product Roadmap) — View
- Propzy Mortgage (Product Requirements) — View
- Playsweep (Web and Game) — View
- Arcane Rush (Web and Game) — View
- EIM (Employee Management) — View
- BPO (ERP) — View

Other Trainings

- Product Management Professional Certificate — View
- Certified Scrum Product Owner (CSPO) — View
- Google UX Design Certificate (Coursera) — View
- AWS Certified Cloud Practitioner — View
- Data Analytics for Product Managers — View
- The Complete Web Development Bootcamp (Udemy) — View
